Working group appointed by the Finnish medical Society Duodecim and the Finnish Society against Sexually Transmitted Diseases

Current care guideline (in Finnish) ¹

Recognition of common sexually transmitted infection (STI) syndromes allows more efficient diagnosis and treatment. These evidence-based guidelines provide advice on the management of STIs including the use of appropriate diagnostic methods and therapeutic regimens. Early and appropriate therapy has the potential to significantly reduce the long-term complications of STIs. Prevention of infections by counseling and treatment of partners contribute to the sexual health of patients.
